

Building Capabilities for Sustaining Change

Chapter 8 — Learning & Resilience

Presented by:

Bibek Ropakheti

Learning Objectives

By the end of this chapter, you will be able to:

- **Define** organizational capability in the context of change.
- **Analyze** the "70:20:10" model of learning and development.
- **Evaluate** the role of coaching and mentoring in building resilience.
- **Understand** the characteristics of a Learning Organization.
- **Apply** strategies to prevent "change decay" and sustain momentum.

What is Change Capability?

Sustaining change requires more than just a plan; it requires **Capacity**.

Definition

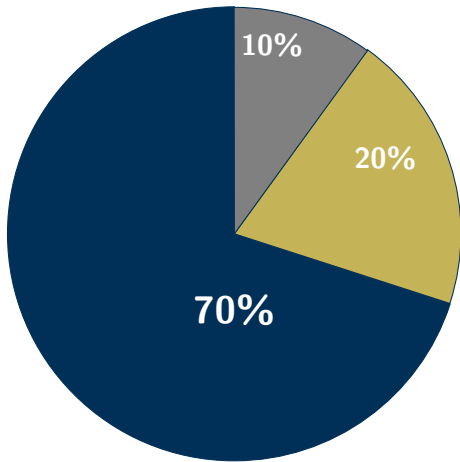

Change Capability is the ability of an organization to effectively plan, design, implement, and sustain change. It is a muscle that must be exercised.

Three Levels:

1. **Individual:** Skills, mindset, and resilience of employees.
2. **Team:** Collaboration and shared accountability.
3. **Organizational:** Systems, culture, and learning processes.

The 70:20:10 Learning Model

How do people actually learn to handle change?

10% Education

(Formal training, Courses)

70% Experience

(On-the-job, challenging assignments)

20% Exposure

(Coaching, Mentoring, Networks)

Building Individual Resilience

Resilience

The capacity to recover quickly from difficulties; toughness. In change, it is the ability to absorb disruption without collapsing.

Key Drivers of Resilience:

- **Self-Efficacy:** Belief in one's ability to succeed.
- **Optimism:** Viewing change as an opportunity, not a threat.
- **Adaptability:** Willingness to learn new skills.

Managerial Action: Provide "Psychological Safety" so people feel safe to experiment and fail.

Coaching vs. Mentoring

Two critical tools for the "20% Exposure" part of learning.

Coaching

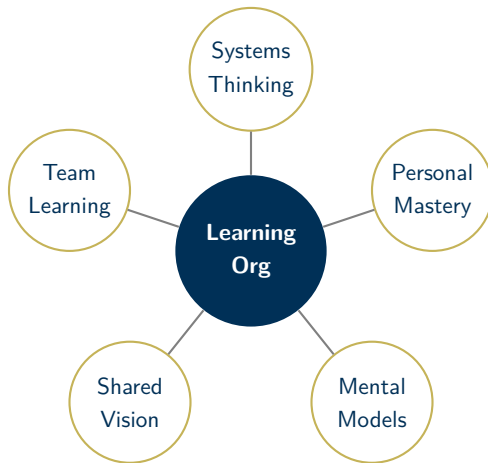

- **Focus:** Task/Performance related.
- **Time:** Short-term.
- **Goal:** Skill acquisition (e.g., learning new software).
- **Direction:** "Here is how to improve X."

Mentoring

- **Focus:** Career/Development related.
- **Time:** Long-term relationship.
- **Goal:** Holistic growth and support.
- **Direction:** "Let's explore your future."

The Learning Organization (Senge)

To sustain change, the organization itself must learn.

"The rate at which organizations learn may become the only sustainable source of competitive

Transferring Knowledge

Capability building fails if knowledge stays trapped in one person's head.

Types of Knowledge:

- **Explicit:** Documented, codified (Manuals, Wikis). Easy to share.
- **Tacit:** Experience, intuition, "know-how." Hard to share.

Strategy

Use **Socialization** (Job rotations, shadowing, storytelling) to transfer Tacit knowledge. Use **Codification** to transfer Explicit knowledge.

The Role of HR and L&D

Human Resources (HR) and Learning & Development (L&D) are strategic partners in capability building.

Key Functions:

- **Competency Mapping:** Identifying the gap between current skills and future needs.
- **Succession Planning:** Ensuring leaders are ready for the new world.
- **Performance Management:** Aligning rewards with new behaviors.

Preventing Change Decay

"Entropy" applies to organizations too. Without energy, systems revert to disorder (the old ways).

Signs of Decay:

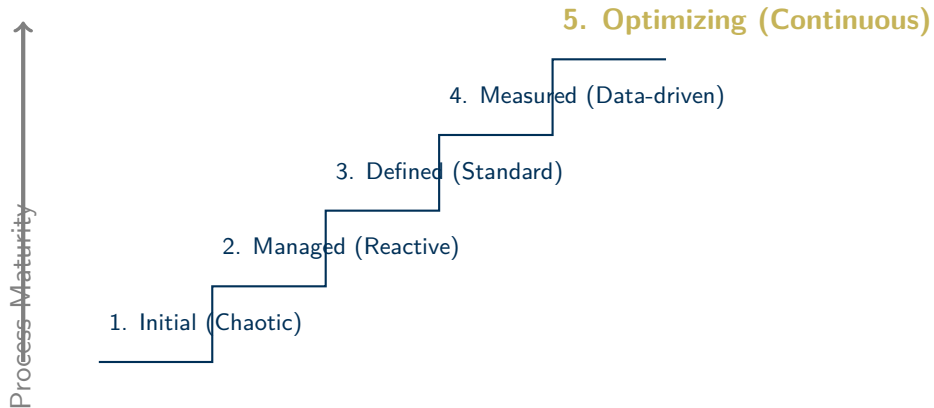

- Workarounds (using old spreadsheets instead of new system).
- Cynicism ("Here we go again").
- "Change Fatigue."

Sustainment Strategy:

- Integrate change into "Business as Usual" (BAU).
- Celebrate milestones.
- Remove the "scaffolding" (consultants) only when the structure is stable.

Capability Maturity Model

Assessing where we stand.

Summary:

1. Sustaining change requires building **Capability** (Skill + Will).
2. Learning happens mostly through experience (70%), not just training (10
3. **Resilience** must be cultivated at the individual level through coaching and support.
4. Organizations must evolve into **Learning Organizations** to adapt continuously.
